**LAMICOLOR®**

## **EDGEBANDING PROCESSING ABS AND ACRYLIC EDGING**

### **Working Temperature**

For best results when applying edge bands to boards or panels the edge bands should be processed at room temperature (not below 10 degrees Celsius)

### **Cleaning**

Acrylic Edge bands should be cleaned in ordinary soapy water or using special cleaners that are designed specifically for use on acrylic materials. Solvent based substances or those containing alcohol should not generally be used.
